Objective and Investment Policy

The Sub-fund is a passively managed index-based UCITS. The Sub-fund's objective is to be inversely exposed with a daily rebalancing to the French stock market by replicating, both upwards and downwards, the performance of the CAC 40® Short strategy index (gross dividends reinvested) (the "Benchmark"), denominated in euro (EUR) and which is a short selling strategy (with a daily -1x leverage effect), with daily rebalancing, on the CAC 40® index (gross dividends reinvested) (the "Parent Index"), the main French stock exchange index, while minimising the tracking error between the Fund's performance and that of the Benchmark. The expected level of the Tracking Error under normal market conditions is indicated in the Fund prospectus. Over a period of one working day, any appreciation in the value of the Parent Index shall lead to stronger depreciation of the net asset value of the Fund, meaning that investors will therefore not benefit from the appreciation in the value of the Parent Index. However, for a period greater than one working day, due to the daily leverage readjustment conducted in the Benchmark, the performance of the Fund will not be equal to the inverse of the performance of the Parent Index and may even follow an identical (i.e. not inverse) development. The Euronext website (www.euronext.com) provides more detailed information about Euronext indices. The Sub-fund aims to achieve its objective by means of indirect replication, namely by entering into one or more OTC swaps (forward financial instruments, "FFIs"). The Sub-fund may invest in a diversified portfolio of international shares whose performance will be exchanged against that of the Benchmark through FFIs. The updated composition of the portfolio of securities held by the Fund is mentioned on the website amundietf.com. In addition, the indicative net asset value appears on the Fund's Reuters and Bloomberg pages and may also be mentioned on the Fund's stock exchange websites. The Sub-fund is eligible for the French Plan d'Epargne en Actions (PEA) and, consequently, invests a minimum of 75% of its assets in the shares of European Union countries.

Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.*

Index Data (Source : Amundi)

Description of the Index

The index tracks the performance of a strategy which provides inverse exposure to the CAC 40 Gross Return Index (the underlying index) by combining a short position in the underlying index and exposure to a risk-free money-market instrument. In a falling market, the index offers a positive return which is equal to the negative performance of the underlying index. In a rising market, the reverse is true.
